

Credenza Fashion — Launch & Go-to-Market Plan

Product: credenzafashion.com — “One shelf for the whole haul.” Turns Weidian, Taobao, Yupoo links, Reddit haul posts, and comments into clean, organized cards with price, photos, and sizing.

Audience: The rep / haul community (r/FashionReps ecosystem, haul TikTok, rep Discord servers).

Document owner: Founder **Status:** Pre-launch → Launch-ready **Last updated:** 2026-07-26

1. Strategic Overview

1.1 Core insight

Haul buyers organize purchases in spreadsheets, notes apps, and scattered bookmarks. Direct self-promotion is banned in nearly every community where these users gather — so growth must come from **product-led sharing** (users broadcasting their own shelves) and **trusted channels** (creators, Discord promo channels, paid ads), not from drive-by advertising.

1.2 Growth thesis

- 1. **Fix the “aha” moment** — show the product working in under 5 seconds (demo, sample shelf).
- 2. **Build the viral loop** — shareable public shelves turn every haul review into an ad for Credenza.
- 3. **Seed through allowed channels** — feedback communities, Discord promo channels, Product Hunt, Reddit ads.
- 4. **Scale through creators** — haul TikTok/YouTube is where the audience actually lives.

1.3 North Star Metric

Weekly Shared Shelves (WSS) — number of shelves shared publicly per week. It captures activation (user got value), retention (they keep adding), and distribution (every share is marketing) in one number.

2. Goals (90 days post-launch)

#	Goal	Target	Why it matters
G1	Weekly Shared Shelves (North Star)	150 WSS by day 90	Proves the viral loop works
G2	Registered users	2,500	Top of funnel health
G3	Activation rate (new user → first card stashed)	40%	Validates onboarding & “aha” moment
G4	Week-4 retention (users active in week 4 after signup)	20%	Proves real utility, not novelty

Table 1 – continued

#	Goal	Target	Why it matters
G5	Share rate (% of active users who share a shelf)	15%	Engine of organic growth
G6	Creator partnerships	10 active creators posting	Opens the TikTok/YouTube channel

Guardrail metrics: signup→stash drop-off, link-parse failure rate (< 5%), page load < 2s.

3. Milestones

Phase 0 — Pre-launch foundations (Weeks -4 to 0)

ID	Milestone	Deliverable	Success criteria
M0.1	Shareable shelf links	Public, view-only shelf URL anyone can open	A shared shelf link renders for a logged-out visitor; view count tracked
M0.2	Homepage “aha” upgrade	Demo GIF/loop of Yupoo link → clean card, or sample shelf embedded on landing page	Visitor can see the product working without signing up
M0.3	Pain-point copy	Landing page names the spreadsheet/bookmark chaos explicitly	Copy passes the “5-second test” with 5 target users
M0.4	Pricing transparency	Pricing/free-tier info visible pre-signup	No surprise paywall complaints in beta feedback
M0.5	Analytics instrumented	Events: visit, signup, first stash, share, return visit	Dashboard live; North Star measurable
M0.6	Launch assets	Product Hunt page draft, demo GIF, 3 social posts, creator outreach template	All assets reviewed and ready

Phase 1 — Soft launch & feedback (Weeks 1–2)

ID	Milestone	Deliverable	Success criteria
M1.1	Feedback-community posts	Posts on r/SideProject, r/InternetIsBeautiful, r/SaaS, Indie Hackers	500 combined visits, 50 signups, 20 pieces of actionable feedback
M1.2	Discord seeding	Joined 5–10 rep/haul Discords; posted only in designated promo channels	Presence in 5 servers; zero bans/removals; 10 Discord-sourced signups

Table 3 – continued

ID	Milestone	Deliverable	Success criteria
M1.3	Top-3 friction fix	Shipped fix for the most-reported onboarding problem	Activation rate improves 5 pts vs. week 1

Phase 2 — Public launch (Weeks 3–5)

ID	Milestone	Deliverable	Success criteria
M2.1	Product Hunt launch	Full PH launch with demo GIF, maker comment, first-comment story	Top-10 product of the day; 1,500 visits; 300 signups
M2.2	Show HN	“Show HN” post framed as a technical product story	Front page or 20 points; qualitative feedback harvested
M2.3	Reddit ads live	Self-serve ads targeted at r/FashionReps & adjacent subs	CTR 0.3%, CPC < \$1.00, signup CPA < \$5

Phase 3 — Creator & organic engine (Weeks 6–12)

ID	Milestone	Deliverable	Success criteria
M3.1	Creator program	10 haul TikTok/YouTube creators with free lifetime access + “how I organize my hauls” content	10 videos/posts live; 1,000 creator-attributed signups
M3.2	Community credibility	Genuine participation in rep communities (answering questions, weeks of history) before any tool mention	Account(s) with real history; tool mentions only when solicited/relevant
M3.3	SEO foundation	5 content pages live (e.g. “how to read a Yupoo link”, “Weidian buying guide”, “haul spreadsheet template”)	Indexed; first organic impressions in Search Console
M3.4	Retention review	Cohort analysis of weeks 1–8	Week-4 retention 20%; decision made on doubling down vs. iterating

4. Metrics Framework**4.1 Funnel**

Visit → Signup → First stash (activation) → Return (retention) → Share (distribution) → Referred visit (viral loop)

Stage	Metric	Target
Acquisition	Weekly unique visitors	2,000 by day 60
Signup	Visit → signup conversion	15%
Activation	Signup → first card stashed	40%
Retention	Week-4 active users	20%
Distribution	Active users sharing a shelf	15%
Viral	K-factor (invites × conversion per shared shelf)	0.2

4.2 Channel-level KPIs

Channel	Primary KPI	Secondary
Feedback subreddits / IH	Signups	Quality of feedback
Discord promo channels	Signups per server	Zero rule violations
Product Hunt	Day-of signups	Followers gained
Reddit ads	Signup CPA	CTR
Creators	Attributed signups	Video views
SEO	Organic clicks/month	Impressions growth
Shareable shelves	Referred visits per shared shelf	Share rate

4.3 Review cadence

- **Weekly:** funnel dashboard, channel KPIs, top friction item.
- **Monthly:** cohort retention, K-factor trend, goal progress (G1–G6).
- **Day 90:** full retrospective — keep/kill/scale decision per channel.

5. Channel Playbook (summary)

Allowed for direct promotion: r/SideProject, r/SaaS, r/indiehackers, r/InternetIsBeautiful, r/AlphaAndBetaUsers, Indie Hackers, Product Hunt, Hacker News (Show HN), Reddit self-serve ads, Discord #self-promo/#tools channels (rules permitting).

Not allowed (do not post directly): r/FashionReps, r/DesignerReps, r/CoutureReps, r/RepTime and similar — direct tool advertising gets removed/banned. Reach these users via Reddit ads, creators, shared shelves, and genuine long-term participation instead.

Highest-leverage move: shareable shelves — every user haul review becomes distribution.

6. Risks & Mitigations

Risk	Likelihood	Mitigation
Bans from community self-promo	High if rules ignored	Only use designated channels; build account history first
Weak activation (visitors don't "get it")	Medium	M0.2 homepage demo before any launch spend
No viral loop (shelves not shared)	Medium	Ship M0.1 pre-launch; track share rate from day 1
Creator outreach ignored	Medium	Free lifetime access + personalized pitches; start with mid-size creators
Single-channel dependence	Medium	Never let one channel exceed 50% of weekly signups
Link-parse failures erode trust	Medium	Keep parse failure rate < 5%; visible fallback ("stash manually")

7. Immediate next actions (this week)

1. Confirm/ship shareable public shelf links (M0.1).
2. Record the demo GIF for the homepage and Product Hunt (M0.2, M0.6).
3. Instrument the six funnel events (M0.5).
4. Draft r/SideProject post and creator outreach template (M0.6).
5. List and join the first 10 Discord servers; read every promo-channel rule (M1.2).
